CRANE SLING
DOUBLE-BRAIDED HMPE ROPE

HIGH-STRENGTH SLINGS FOR ARBORIST LIFTING AND TREE REMOVALS

Yale Crane Sling Kits are purpose-engineered for arborists who rely on crane-assisted removals to handle heavy wood with precision and control. Built in the USA with Maxi-braid Plus double-braid construction, each sling features a 100% HMPE load-bearing core for maximum strength retention and low elongation under heavy load. A thick polyester cover enhances abrasion resistance against rough bark and hardware, while Cordura® chafe sleeves add protection in critical wear zones so the rope stays mission-ready longer.

Featuring two 25ft neon green dead-eye slings and one 35ft blue dead-eye sling—each with 12-inch eyes—the kit delivers a versatile rigging system with a 6,800 lb WLL and a 5:1 safety factor for confident lifting performance. Designed specifically for the demands of crane tree work, this kit provides exceptional handling, consistent performance, and the unmatched toughness arborists depend on when the lift counts.

OPTIMIZED FOR TREE WORK

Designed for crane-assisted removals, balancing high strength and smooth handling to safely manage limbs and canopy sections aloft.

UNMATCHED LIFTING STRENGTH

Rated for a 6,800 lb Working Load Limit with a proven 5:1 safety factor — built to handle demanding crane removals with confidence.

OUTSTANDING CONTROL & HANDLING

SMOOTH HANDLING & CONTROL

Low-elongation design keeps loads steady and predictable, allowing crane crews to position limbs with precision.

ARBORIST-DRIVEN DESIGN

Includes two 25 ft neon green Dead-Eye slings and one 35 ft blue Dead-Eye sling—each built for fast setup, confident handling, and the demands of tree work.

EXTENDED SERVICE LIFE

Premium polyester fiber and reinforced abrasion protection help the slings endure repeated contact with bark, rigging hardware, and crane operations.
