CRANE SLING
DOUBLE-BRAIDED HMPE ROPE

HIGH-STRENGTH SLINGS FOR HEAVY DUTY ARBORIST JOBS AND TREE REMOVALS

Yale Crane Sling Kits are purpose-engineered for arborists who rely on assisted tree removals to handle heavy wood with precision and control. Built in the USA with Maxibraid Plus double-braid construction, each sling features a 100% HMPE load-bearing core for maximum strength retention and low elongation. A thick polyester cover enhances abrasion resistance against rough bark and hardware, while Cordura® chafe sleeves add protection in critical wear zones so the slings last longer.

Featuring two 25ft neon green eye-and-eye slings and one 35ft blue eye-and-eye sling—all in 5/8 in. diameter—the kit delivers a versatile rigging system with a 6,800 lb WLL and a 5:1 safety factor for confident handling performance. This sling is ready to take on demanding loads with toughness and dependability, and is built specifically for the rigors of arboriculture work—delivering consistent results and the unmatched durability arborists rely on.

OPTIMIZED FOR TREE WORK

Designed for assisted removals, balancing high strength and smooth handling to safely manage limbs and larger tree segments.

UNMATCHED STRENGTH

Rated for a 6,800 lb Working Load Limit with a proven 5:1 safety factor — built to reliably handle demanding removals.

OUTSTANDING CONTROL & HANDLING

SMOOTH HANDLING & CONTROL

Low-elongation design keeps loads steady and predictable, allowing crews to position limbs with precision.

ARBORIST-DRIVEN DESIGN

Includes two 25 ft neon green eye-and-eye slings and one 35 ft blue eye-and-eye sling—each built for fast setup and confident handling.

EXTENDED SERVICE LIFE

Premium polyester fiber and reinforced abrasion protection help the slings endure repeated contact with bark and rigging hardware.
